

AXCES II

アライ

Development at Arai is an always-continuing process. A perfect example of this philosophy is the Axces II, successor to the very popular Axces. For the Axces II we have constructed a complete new Super fiber (SFC) outer shell, with the proven wide-screen SAI aperture opening. The Axces II offers all the famous Arai features, making this new model a tough contender in the popular mid-range price segment.

Outer shell

SFL (Super Fibre Laminate)

This is the basic Arai outer shell. Super fibre provides more comfort than other shell materials, yet is still strong and lightweight.

Ventilation

One-piece rear vent increases the flow of hot and damp air out of the helmet. Front duct provides fresh and cool air around the top of the head. Closable chin vent controls the airflow to the chin area. Unique brow vents guide fresh air to the forehead area without the need for holes in the outer shell and impact absorbing liner.

Closable chin vent

The closable chin vent allows control of the flow of fresh cool air into the chin area.

Interior

Replaceable cheek pads. Arai's cheek pads are offered in different thickness sizes, to make a more custom fit possible. They follow the jaw line perfectly, offering a better fit that keeps the helmet in position even at higher speeds.

Comfort

Large operating knobs. Large buttons for convenient operation, even with gloves on.

Hyper Ridge

The 'bumper' is a reinforcement band that circles the bottom of the shell adding strength and lowering the helmet's centre of gravity. Flares out for easier putting on and taking off.

Wide SAI vision

Next generation MotoGP tested Super AdSis "I" visor is extended by 5 mm at both sides and offers the widest peripheral vision in the business for better performance.

SuperAdSis LRS (Lever Release System)

Makes visor changes possible in seconds, without tools or removal of the side pods. Cleaning or replacing the shield is easier than ever.

Five times inspected

Each Arai helmet goes through five separate quality-control departments: after the shell is made, after painting and graphic completion, after assembly and two in-process inspections.

Washable interior

The premium quality interior of any Arai helmet can be easily cleaned, in place, with mild soap and lukewarm water.

Handmade

It can take up to five years for our experts to earn the right to create an Arai shell. Each shell can take up to 27 steps and to build one Arai helmet will take about 18 man-hours.

All-day comfort

All-day comfort with the Arai interior fit and shape together with the finest liner materials and the extensive ventilation system. And thanks to the perfect balance and weight distribution of the helmet, you hardly notice you are wearing an Arai.

Penetration tested

All Arai helmets are penetration tested, although not required by European helmet standards. The Arai penetration test is performed with a 3kg test cone that strikes from a height of 3m on the helmet.

Double-D ring device

The flat and D-shaped rings fit smooth against the chin. No moving parts, no corrosion problems and just pulling the tab is enough to loosen the fastener.

Smooth shape, better protection

The smooth outer shell of Arai helmets is designed to glide without unnecessary resistance. You don't want to decelerate your helmet more than necessary. That's why all Arai vents and ducts are designed to break off during an impact.

Hard outer shell, soft inner shell

Arai uses a very hard outer shell to spread impact forces and a soft inner shell to absorb remaining energy. The multiple-density EPS inner shell is made using a unique technology of combining three to five densities in various areas as a single component.

Organic shape

The organic shape of an Arai outer shell offers a more natural appearance, seals better and conforms more to the head's natural shape for improved comfort, fit and to help minimize wind turbulence.

5-year limited warranty

All Arai helmets are warranted against defects in materials and workmanship, and are serviceable only for the properly fitted first user for 5 years from date of first use, but no more than 7 years from date of manufacture.

Different outer shells

Unlike many other manufacturers Arai provides one size outer shell for each two-helmet sizes for most models. Together with different shaped outer shells for different models it is almost impossible not to find the fit you are looking for.

Arai In-house test

This Arai helmet is designed to meet the stringent Arai In-house standard requirements, in addition to mandatory standards such as ECE 22-05 and voluntary standards such as SNELL M2010.
